

Chameleon hash functions

1. Collision-resistant chameleon hash functions... (Multiple answers can be correct.)

- (A) ...are collision-resistant for users that know the trapdoor.
- (B) ...are collision-resistant for users that don't know the trapdoor.
- (C) ...imply collision-resistant hash functions (existentially, i.e., if collision-resistant CHFs exist, then so do CRHF).
- (D) ...exist if the RSA assumption holds.
- (E) ...exist if and only if the Discrete Logarithm assumption holds.

2. Random oracles are good chameleon hash functions.

- (T) True
- (F) False
